November 2005

SPIDER

<http://spider.science.strath.ac.uk>

SPIDER is a bespoke VLE delivering learning material, providing online support and departmental management tools to a wide sector of the university community.

This newsletter outlines recent innovations, updates and changes made to the system

More information on current SPIDER development is available via the "development diary" link on SPIDER-DEV at spider-dev.pharmacy.strath.ac.uk/

Feel free to email comments or suggestions about SPIDER or this newsletter.

Extras and Updates

November has seen a number of minor changes to SPIDER, updating or adding new features to existing tools.

Questionnaire update

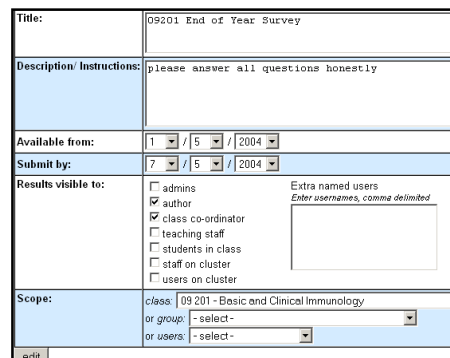

The questionnaire tools on SPIDER allow staff to create questionnaire "forms" to quickly and easily get opinions and feedback from users. The layout of the tools have been updated to use the new "tab" format now common in other SPIDER tools.

The new questionnaire layout uses tabs for quick access to each of the tools it provides

The major change is the addition of a "nag" option (see box out), which allows the author of the questionnaire to send a "nag" email to those students in a class who have yet to complete the questionnaire. Early reports from Chemistry indicate that the reminder email can have a significant impact on user returns.

The users who can see the results of questionnaires has been extended. The questionnaire author can now add a "user list" which can include any users - previously the list could only be a selection of admin, author, class co-ordinator, staff and/or students in class. Users allowed to

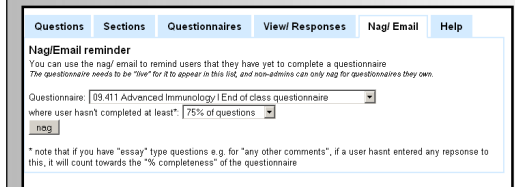

"Results visible to" can now have a custom list of users, giving questionnaire authors greater flexibility in who can access results

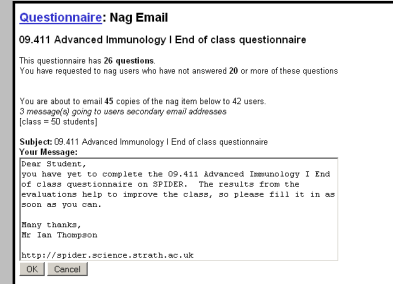

view results on SPIDER have the option to export them in "csv" format for further analysis in addition to the on-screen view.

Nag-'em

The new nag feature in the questionnaire tool allows staff to send a reminder email to users who have yet to complete a questionnaire.

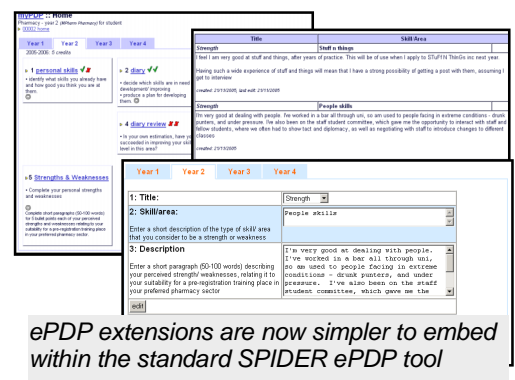

Staff can choose to nag students who have failed to complete a certain percentage of the questionnaire.

The nag message can be customised, and staff can see how many email reminder messages will be sent before confirming the message. The emails are then sent out to the students.

ePDP extensions

The core SPIDER ePDP has the ability to accept "extension modules" to add further capabilities and functionality. A "strengths & weaknesses" extension, allowing the owner of the ePDP to create a series of strength and weakness entries has been created, and is undergoing testing on the SPIDER development server. Post-testing, this will be rolled out for use by the Pharmacy year 3 students.

ePDP extensions are now simpler to embed within the standard SPIDER ePDP tool

The code behind the extension feature has been modified to allow the alternative ePDPs used by Chemistry and Mathematics to be better integrated with SPIDER.

Assignments

SPIDER provides an electronic assignment returns system. The staff view of

SPIDER newsletter Nov 2005

returned assignments now compares the returns with the class list relating to the assignment, to allow staff to quickly see who hasn't submitted an assignment.

There is now also an option for staff to provide a model answer to any assignment, uploaded at the same time the assignment is set. Once a student has returned their assignment, they can view the model answer file. The student can also add comments to their uploaded assignment, e.g. to indicate how well they think they have covered the points in the model answer.

your answer

Model answer

Compare your answer with the model answer using the above links. How well do you think you answered the question?

Give an indication of how many marks (out of total) you think you would get for this answer.

Submit

a model answer is shown below the student's

As before, staff can assign a mark to the returned assignment and post comments on the students work.

Add student to classes

Although SPIDER is successfully integrated into the Oracle registry database for access to student data and class lists information, a small proportion of students still find they don't appear on some of their classes lists. The ability to add all a students classes was made available to admin users last month and has now been extended to staff users.

Focus on....

The Focus on... Section is a regular monthly feature used to highlight some of SPIDER's many tools. This month...

Discussions part 1

SPIDER has an extremely active discussion environment, with 3-400 messages posted every day on weekdays during term time. There are a number of different "boards" or "forums". Some are open to a whole cluster, such as the "general", "year 1" and "year 2" discussion, where topics range from the latest cinema releases and organising 5-a-side football matches to selling old textbooks, where to find the cheapest student deals on

computers and where the cheapest pint in Glasgow can be found. As well as these general boards, each class on SPIDER has its own forum where discussions take a more academic flavour, covering anything from questions about the last lecture topic and where the class test is to be held, through to staff-lead debate on the pros/cons of the Hubble space telescope and its huge annual

discussion

SPIDER discussion go

new in: general go

Discussion topic: Hubble Space Telescope

Discussion topic: Hubble Space Telescope

The Hubble Space Telescope (see Lecture 4) cost \$1.5 billion to build and costs \$250 million per year to run.

Is it justifiable to spend that amount of money on a telescope?

BB310 Tut MA114 Cloning Disease G

Please download the tutorial from the Ad class site. You will tutorial on Thursday

Discussion topic: Hubble Space Telescope

of course, you can't put a price on learning about our planet, where it came from and where it's going!

Discussion topic: Hubble Space Telescope

I agree it allows us to see things we could never have dreamed of seeing. Just do a google search for "hubble images!"

The "new in" list on the home page and a discussion about the Hubble telescope budget

budget. Users can keep up with hottest discussion topics via the "new in" list on the SPIDER home page which shows which forums have had postings since the user last hit their "mark discussions read" button. Adding to the discussion is simply a case of hitting the "reply" button to continue a conversation, or selecting "start new thread" to begin a new topic. Users can create a discussion filter, so only discussions in which they have an interest appear in their "new in" list. In class discussion groups, eager students are able to copy their postings to staff via email to alert them to their question or input to the discussion forum.

More on discussions next month, but in the meantime, why not get more involved and start reading and posting on the different boards?

In Development

As part of the SHEFC re-engineering assessment (REAP) project, a "script tutor" is under development which will test Pharmacy students by presenting them with a scan of a prescription which they have to check, selecting any errors they identify from a drop-down list. The technology could be adapted to other disciplines where students need to study an image and select errors or other features.

As always, anyone wishing to suggest new features/ improvements to SPIDER, or to submit anything for publication in the newsletter, just contact us at: e: spider-vle@strath.ac.uk t: x2969
